

FSC640 Wireless Collaboration Switcher

FSC640

UDG-G122-000

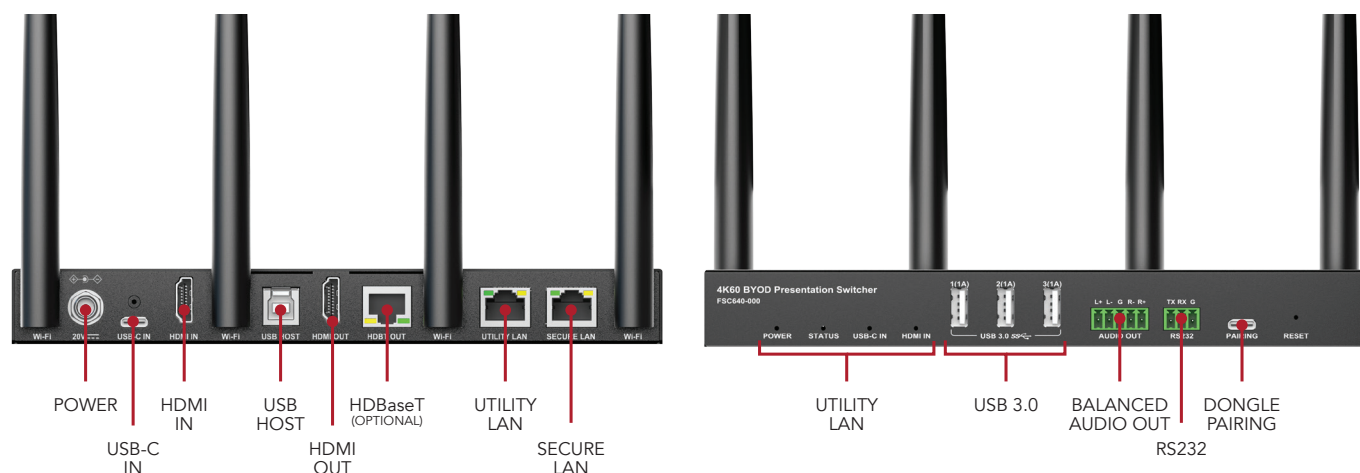

Seamlessly share, control, and collaborate with 4K wireless presentations, multiview support, and unified conferencing integration—all in one powerful, plug-and-play solution.

The FSC640 redefines wireless collaboration by supporting leading BYOD protocols, including AirPlay, Miracast, and Chromecast, making it easy to share content from smartphones, tablets, laptops, and desktop computers. When paired with the **UDG-G122-000 4K Type-C wireless screen transceiver**, users can deliver ultra-clear 4K video at 30FPS with audio as well as wireless USB device sharing for a premium meeting experience. With simple plug-and-play setup, just connect the dongle, press the button, and start collaborating. Teams can present without complex configurations.

The FSC640 features a Multiview mode, allowing two video sources, wired or wireless, to be displayed side by side for better content sharing and collaboration. The UDG-G122-000 enhances this capability with USB HID back-control, enabling presenters to control their laptops directly from a connected touch panel or interactive flat panel display (IFP). More importantly, it supports wireless conferencing integration, allowing users to seamlessly select cameras, microphones, and speakers directly within their preferred video conferencing apps—all without extra cabling.

Designed for today's hybrid meeting environments, the FSC640 includes USB connectivity for devices like SPK300 speakerphones and 4K cameras like the CAM600, ensuring smooth integration with popular platforms such as Zoom and Microsoft Teams. For advanced installations, an optional model with HDBaseT 3.0 provides single-cable extension of video, USB, and RS-232 control, streamlining deployments and minimizing clutter. Together, the FSC640 and UDG-G122-000 deliver a complete wireless presentation and conferencing solution, built for flexibility, simplicity, and high-performance collaboration.

FSC640 Wireless Collaboration Switcher

BYOD support for AirPlay, Miracast & Chromecast

Auto switching between
HDMI & USB-C

Intuitive Status LEDs providing clear visual status indicators for easy monitoring

Streams 4K/30 FPS with audio

USB HID back-control from touch panels/IFPs

Built for hybrid rooms with flexible connectivity
